

“The most important thing in the room is not the furniture –it’s the people.”

—Gilbert Rohde

Let’s Move Forward Together

A New Approach to the Workplace in the Post-COVID-19 Era

The impact of COVID-19 has caused a major shift and readjustment to our lives and surroundings. The work environment that we once knew is rapidly transforming and will continue to undoubtedly evolve. There is little consensus on how long the pandemic will last, or how it will ultimately unfold. As areas enter stabilization and recovery phases, workers will soon return to the physical work environment. Now is the time to plan and prepare for this transition.

We recognize the critical role people play in an organization’s success. We also understand the value of place—the places where people work, learn, heal, live and play. Physical places should not only provide individuals with a meaningful connection to work, colleagues and community, but also provide safety and protection.

► Is your workplace ready?

Henriksen/Butler has over 40 years of experience helping companies create inspiring, productive and safe places to work. Our workplace strategy services and placemaking designers can help you define new practices and prepare your people and place for what’s next.

How We Can Help You:

Return to Workplace Strategy

Many organizations are suddenly faced with difficult realities. How do you prepare people, place and business practices for a post-COVID-19 environment? One-size will not fit all. Our experienced workplace strategy team can help you develop your strategy, change management communication and employee return to work experience.

Spacing

Evaluate and reduce occupancy, adjusting furniture spacing to meet minimum 6ft/2m distance between people. Includes work stations, collaborative spaces, meeting rooms, and break areas.

Reorientation

Reconfigure work stations and collaborative areas to allow for recommended distancing and reduce face-to-face orientation in low, open environments.

Boundaries

Create positive boundaries within existing work stations by incorporating moveable or fixed screening, storage elements and partitions. Evaluate and incorporate purposeful circulation and pathways to minimize close contact.

Work From Home Solutions

Create an “at home” work environment with ergonomic solutions that support health, safety, technology and work productivity.
